ICS Outage Notification for IT Transition

Customs is in the process of transitioning to new IT arrangements, including the migration of services to a new IT provider and to new facilities, as advised in ACCA 07/20 September 2007. Updates surrounding IT Transition have been recently published on the Cargo Support web site at: <http://www.customs.gov.au/site/page.cfm?u=5724>

The current schedule has the Customs mainframe environment, which hosts the Integrated Cargo System (ICS), cutting over to the new IT facilities on 12-13 April 2008. Customs is expecting the cutover to take approximately 10 hours. The ICS will be unavailable from Saturday 12 April, 1600 hrs AEST to Sunday 13 April, 0200 hrs AEST. The "Broker Import Summary Report" will not run on Saturday 12 April or Sunday 13 April however is expected to be available again on Monday 14 April.

The selected time aims to minimise impacts to industry. A number of factors were considered when making this decision including:

- The number of transactions processed in the ICS during the outage window;
- The number of industry clients processing transactions during the outage window;
- The interfaces to the ICS;
- Impact on AQIS;
- Overall impact on industry (mainly affecting air cargo sector); and
- The timeframe for the reporting systems to be updated with data loads.

As part of the transition to the new facilities it is expected that there will be a 10 hour ICS outage from Saturday 12 April, 1600 hrs AEST to Sunday 13 April, 0200 hours AEST.

What will Customs do?

On Saturday 12 April, 1400 hrs AEST the ICS screening period for air cargo reports will be reduced to one hour, this will continue for two hours after the resumption of the ICS, being Sunday 13 April, 0400hrs AEST.

Customs will immediately invoke the Business Continuity Plan (BCP) up to the Phase 3 level for both Imports and Exports for the duration of this outage. BCP documents that can be submitted for the duration of the outage are:

- Cargo Reports
- Import Declarations
- Underbond Movements
- Export Declarations
- Export Consolidations

Customs acknowledges the impact this outage may have on industry being able to meet cargo reporting obligations during this time. We encourage industry, if at all possible, to report cargo which is due to be reported during the outage period before the outage commences. This will ensure that the impact the outage has on industry compliance levels will be minimised. Customs will take the outage period into consideration when reviewing cargo reporting data for compliance purposes.

We encourage industry, if at all possible, to report cargo which is due to be reported during the outage timeframe before the outage commences.

What is Customs asking Industry to do?

While Customs will facilitate the movement and clearance of cargo during this period we urge industry to fully explore the possibility of reporting any relevant documents prior to or post the outage. This will avoid the duplication of effort that is needed as any BCP documents reported during the outage are required to be submitted in the ICS within 24 hours of the system being available.

Although EDI users can transmit messages during the outage period, those messages will be queued and not processed until such time as the ICS becomes available. Users will not receive acknowledgements for these messages until that time. All users who choose to send messages during the outage period that have resend functionality, should consider disabling it for this outage period to avoid sending duplicate messages.

Overview - How Customs transition affects industry*

The migration of Customs services is being staggered to minimise any risk to Industry and other stakeholders. Customs test environments, including the Stress and Volume Test, User Acceptance Test and Development and Industry Test are being transferred before the Production environment is migrated.

From an Industry perspective, interfacing with Customs cargo business systems will remain the same. There is no general requirement to change certificates, IP addresses or email addresses. The only exception is for those clients with a direct connection to the existing Burwood data centre. All affected direct connection clients have been contacted and their change requirements are being addressed.

* A full overview was provided in the first edition of the IT Transition update, available on the Cargo Support web site. To view this go to:
