

External Release Notes 14.4.01

Purpose

The scheduled date for Integrated Cargo System (ICS) release 14.4.01 (c386969) is 23rd November 2013.

These notes are designed to provide plain English descriptions of the changes with the aim of providing a better understanding of what has been fixed and how it might relate to ICS business processes.

C295518 - Vessel Summary Screen failing to display all the reported cargo

The Vessel Summary List screen, available through the Vessel Summary Search (ICS Imports and Imports>Diagnostics menu) is designed to show all cargo for a specified vessel and voyage.

The Vessel Summary List screen does not consistently display all cargo for a vessel and voyage, particularly where a series of amendments to cargo reporting documents (specifically Cargo Lists) are created for that voyage.

This change will ensure that all currently reported cargo for the vessel and voyage is displayed in the Vessel Summary List screen.

C397972 – Withdrawn Progressive Discharge Reports (PDR) are able to be amended (via EDI), preventing lodgement of a new PDR for the Vessel/Voyage/Estab ID combination

When a PDR is lodged and has been subsequently withdrawn, the system currently allows the withdrawn document to be amended (via EDI only). This then prevents the lodgement of a new PDR with the same identifiers resulting in the transaction being rejected with the error message 'PDR ALREADY EXISTS'.

This change will ensure that amendments cannot be made to the withdrawn document and a new PDR transaction can then be lodged with the same identifiers.
