

## External Release Notes 14.4.05

### Purpose

The scheduled date for Integrated Cargo System (ICS) release 14.4.05 (C477882) is 11 February 2015

These notes are designed to provide plain English descriptions of the changes with the aim of providing a better understanding of what has been fixed and how it might relate to ICS business processes.

### Change Items

#### **C467055 – Make sure ICS recognises Air CTO as a CTO Establishment for correct status calculations**

ICS is preventing Air CTO's from receiving a correct LOAD status for Prescribed Goods EDNs in some scenarios. Currently the Air CTO Establishments are being identified as s77G Depots, and not as s15 CTO establishment types. This causes the ICS to provide Air CTO's with incorrect HOLD statuses. This change corrects the relevant business documentation and system code and ensures Industry will receive the correct LOAD status for these transactions.

#### **C455868 – Ensure ICS recognises Export Sub-Manifest Report (CRN) document status for CTOREC LOAD status calculations**

ICS is preventing Cargo Terminal Operators (CTO's) from receiving a correct CTO Reival (CTOREC) LOAD status when the reported CRN document status changes from ERROR to CLEAR. This fix will ensure the ICS transmits the correct updated status, i.e. Industry (CTO's) will receive the correct CTOREC LOAD status advices when reported CRN status updates from ERROR to CLEAR.
