

Release 8.4.06 – Notes

Purpose

This release (release 8.4.06) scheduled for implementation on 23 April 2007 contains a large volume of changes and incidents fixes. These notes are designed to provide plain English explanations of the nature of the incidents and changes that are client facing, to allow clients to better understand what has been fixed and how it might relate to their business.

General Incidents

c1353/i27565 - Status for Cargo where Goods have been Delivered

Formerly, the status of cargo was recalculated when an Import Declaration was amended, regardless of whether the goods had been delivered or not. This resulted in numerous CARST messages being transmitted for cargo that had already been delivered. Now this issue has been fixed, and the status of cargo is only sent where goods have not been delivered.

c3155/i273930 - Allow locum brokers to be employed by more than one licensed brokerage

Previously, the ICS client functionality did not allow locum brokers to be employed by more than one licensed brokerage. A fix has been implemented so that the problem no longer exists.

i203054 - Customs Interactive Air Waybill Outturn Date/Time display

Clients using the Customs Interactive when displaying an Air Waybill Outturn Report, the UTC/GMT date and time were sometimes displayed. A change was implemented successfully to convert UTC/GMT date and time to local (AEST) date and time when displaying all Air Waybill Outturn reports.

Declaration related incidents

c5239/i273945 - Add Print Receipt Indicator

Originally the ICS did not enable requests for printing receipts from a clients own system and they had to use the Customs Interactive. A change now implemented allows our clients to request a 'Print of the Official Receipt' automatically when lodging their import declaration, whether by EDI or CI, by setting a new 'Print Receipt Indicator' to Y (yes). Once the conditions are met to trigger the outbound receipt message (PAYREC), a print (pdf) will be forwarded simultaneously.

c5386/i199777 - New Error Message

Previously on import declarations, the calculation of Total Customs Value could be zero or a negative amount. This has now been fixed so that clients will receive an error message advising of input errors.

c5406/i174145/i258718 - Paid Under Protest (PUP) on Import Declarations

A new business rule has been introduced to allow our clients the ability to Pay Under Protest on subsequent lodged versions of import declarations. This has now been implemented successfully.

i271293 - Import Declaration Response (IDA) message

Previously, where maximum field lengths for descriptions are exceeded, clients were not receiving Import Declaration Responses from the ICS. This has now been fixed.

i42407 - Line Defaults not available

In the past, our clients were unable to use line defaults on subsequent sessions of the ICS that are used to create an import declaration. This no longer occurs.

i57465 - Lodgement Screen

Previously, when using the 'prev' button in the lodgement screens, answers were not kept or displayed appropriately. This issue has been rectified and now works correctly.

Sea Cargo Reporting related incidents**i135665 - Amended Destination on Cargo Report**

Previously the Destination Port on a cargo report could be amended with several approved underbond movements on a container, however the CLEAR status was not being transmitted to the amended destination port correctly. A fix has been implemented and now works correctly.

Export Reporting related incidents**i240110 - EDNs not being Carrier Manifest Expired**

Previously Carrier Manifest Expiry Failure occurred due to size constraints. This issue has now been fixed.
